HAG Modellbahnen / Model Trains

Technology

The HAG model Re 460/465 shows the lights in different positions like the real ones on the rail. You can switch the lights as you wish, in service of shunting or high speed. Additional cab lighting in driver's direction is on F12/Aux4. Full power consumption < 10mA

Warning: For the intern CPU please deactivate all dimmers on functions

Register 1 All functions getting active on the light button.
